Welcome to Aquatic Geomicrobiology!  
Our mission is to explore and  
understand the world of microbial  
communities in the environment. We  
assess functional microbial diversity in  
aquatic and subsurface environments by  
molecular approaches to identify key  
players

### **Aquatic Microbiology - Frontiers**

Geomicrobiology studies microorganisms that are driving the Earth's biogeochemical cycles, mediating mineral precipitation and dissolution, and sorbing and concentrating metals. The applications include for example bioremediation, mining, climate change mitigation and public drinking water supplies.

### **Geomicrobiology - Wikipedia**

Water microbiology refers to the study of the microorganisms that live in water, or which can be transported from one habitat to another by water. Water can support the growth of many types of microorganisms. This can be advantageous. For example, the chemical activities of certain strains of yeasts provide us with beer and bread.
