The 3.5 was an evolution of the old 60 degree V6 and seemed to finally be a pretty solid engine after taking care of the 3100/3400 intake issues. I don't really want a vehicle I'll be spending \$\$\$ on due to a poor design resulting in high labor costs, but a 100K warranty is something I'll be taking into consideration also.

The crankshaft harmonic balancer is a device connected to the front of an engine's crankshaft, usually built into the crankshaft pulley. Its purpose is to absorb and reduce harmonic vibrations from the engine as the crankshaft rotates, as harmonic vibrations at high engine speeds can cause accelerated wear and damage to the components.

Is there any known problems with the 3.5 like there was with the 3.1 and 3.4? Specifically im looking for information on leaking intake manifold gaskets and blown head gaskets. Does this still seem to be a recurring problem or has G.M worked out the issues with the 60 degree v6's for the most part? Mine is a 07 LT with the 3.5 LZE (flex fuel).
