Introduction of  
Compiler Design  
Compiler is a software  
which converts a  
program written in high  
level language (Source  
Language) to low level  
language  
(Object/Target/Machine  
Language). Cross  
Compiler that runs on a  
machine 'A' and  
produces a code for  
another machine 'B'.

## 1.9 STRUCTURE OF THE COMPILER DESIGN

Phases of a compiler: A compiler operates in phases. A phase is a logically interrelated operation that takes source program in one representation and produces output in another

representation. The
