Algorithm Design M. T. Goodrich and R. Tamassia John Wiley & Sons Solution of Exercise C-1.8 Since r is represented with 100 bits, any candidate p that the eavedropper might use to try to divide r uses also at most 100 bits. Thus, this very naive algorithm requires 2 100 divisions, which would take about 2 80 seconds, or at least 2 55 years.

Tamassia, Wiley, 2015. Scalability. q Scientists often have to deal with differences in scale, from the microscopically small to the astronomically large. q Computer scientists must also deal with scale, but they deal with it primarily in terms of data volume rather than physical object size.
