("Gravure Process and Technology" 7) Gravure is a direct printing process: the image on the cylinder is printed directly to the substrate. This results in better ink laydown and thus a more faithful image rendering. Versatility. Image data wrapped around the cylinder can be continuous, so no plate seam shows, such as in wall paper or gift wrap. Gravure printing routinely uses a wide variety of substrates:

What is Gravure?

Web printing with the gravure process is called rotogravure. Gravure printing is usually carried out as a web process on lightweight (below 40 lb/ream) coated or uncoated groundwood paper with minimal pressure on the plate. Therefore, paper smoothness is very important. Compressible paper and good ink receptivity help print quality.
