The structural engineering is an essential component of Architecture. The creativity and imagination of an architect come to reality by adopting a suitable structural system. Architects should understand the basic principles and concepts of structure in order to apply the structural system suitably. It is also needed for an Architect to communicate effectively with consultants and contractors about the conceived structural system.

structural systems. It could be argued that architecture and the efficiency of many buildings, particularly in the late 1980s and early 1990s suffered from the undirected freedom permitted by the computer. In an earlier time, the computational limitations on the structural engineer necessitated straightforward struc-
